State	Finished
Completed on	Sunday, 30 August 2026, 9:15 PM
Time taken	17 secs
Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Value for x

Output Format

First Line Contains Integer – Floor value for x

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>

int findFloor(int arr[], int low, int high, int x) {
    int ans = -1;

    while (low <= high) {
        int mid = low + (high - low) / 2;

        if (arr[mid] <= x) {
            ans = arr[mid];  // Potential floor, try to find a larger one on the right
            low = mid + 1;
        } else {
            high = mid - 1; // Look on the left side
        }
    }

    return ans;
}

int main() {
    int n;
    if (scanf("%d", &n) != 1) return 0;

    int arr[n];
    for (int i = 0; i < n; i++) {
        scanf("%d", &arr[i]);
    }

    int x;
    scanf("%d", &x);

    printf("%d\n", findFloor(arr, 0, n - 1, x));
    return 0;
}
```

	Input	Expected	Got	
✔	6 1 2 8 10 12 19 5	2	2	✔
